

SSL/TLS

Edge Certificates

Customize your edge certificates, which encrypt traffic between your visitors and Cloudflare.

[Edge certificates documentation](#) ↗

Manage Edge Certificates

Your plan includes:

- A shared Cloudflare universal SSL certificate and a corresponding backup certificate

Additional certificate customization options:

- [Activate Advanced Certificate Manager \(ACM\)](#) to order auto-renewing, wildcard or dedicated certificates with customizable hostnames
- [Upgrade to the Business plan](#) to upload a custom certificate

Advanced Certificate Manager (ACM)

📺 [Video guide](#)

Get more control and flexibility over your certificates and unlock TLS settings.

- Issue auto-renewing, wildcard and dedicated certificates
- Customize hostnames on certificates
- Cover more than one level of a subdomain (e.g. dev.www.example.com)
- Specify cipher suites to enhance security and meet industry standards

Activate

- Define your preferred certificate authority (CA) and validity period

Total TLS

Cloudflare will issue individual certificates for every proxied hostname. Once enabled, all hostnames in your domain will be covered by a TLS certificate.

[Activate Advanced Certificate Manager \(ACM\)](#) to enable Total TLS

Select a Certificate Authority 

API 

Cipher suites

Customize the [cipher suites](#)  used in the SSL/TLS handshake that establishes a secure connection between clients and the Cloudflare network.

[Activate Advanced Certificate Manager \(ACM\)](#) to configure Cipher Suites.

Help 

Always Use HTTPS

Redirect all requests with scheme "http" to "https". This applies to all http requests to the zone.

Enabling this while your origin also forces HTTPS redirects can cause [redirect loops](#). Disable origin-side HTTP-to-HTTPS redirects to avoid ERR_TOO_MANY_REDIRECTS. [Learn more](#)

HTTP Strict Transport Security (HSTS)

Enforce web security policy for your website.

Status: On

Max-Age: 0 (Disable)

Include subdomains: On

Preload: On

This setting was last changed 2 months ago

[Change HSTS Settings](#)

Minimum TLS Version

Only allow HTTPS connections from visitors that support the selected TLS protocol version or newer.

TLS 1.0 (default) ▼

Opportunistic Encryption

Opportunistic Encryption allows browsers to benefit from the improved performance of HTTP/2 by letting them know that your site is available over an encrypted connection. Browsers will continue to show "http" in the address bar, not "https".

Create a [Configuration Rule](#) to customize these settings by hostname.

This setting was last changed 7 minutes ago

TLS 1.3

Enable the latest version of the TLS protocol for improved security and performance.

Automatic HTTPS Rewrites

Automatic HTTPS Rewrites helps fix mixed content by changing "http" to "https" for all resources or links on your web site that can be served with HTTPS.

Create a [Configuration Rule](#) to customize these settings by hostname.

Certificate Transparency Monitoring

Receive an email when a Certificate Authority issues a certificate for your domain.

Certificate Transparency Monitoring has changed. If you previously enabled CT Monitoring, any recipients listed below might be carried over from your previous settings (account members with the **SSL and Certificate Write** permission). You can add or remove them at any time.

[Help](#) ▶

Disable Universal SSL

Disabling Universal SSL removes any currently active Universal SSL certificates for your zone from the edge

[Disable Universal SSL](#)

and prevents any future Universal SSL certificates from being ordered. If there are no dedicated certificates or custom certificates uploaded for the domain, visitors will be unable to access the domain over HTTPS.
